

Fiber Optic Terminal Box Color

Article Overview

Fiber optic terminal boxes are typically neutral-colored (white, gray, or beige), while the fibers and cable jackets inside follow standardized color codes for identification.

Terminal Box Colors

Fiber optic terminal boxes themselves usually come in neutral colors such as white, gray, or beige. These colors are chosen for visibility, safety, and compatibility with indoor or outdoor environments, rather than to indicate fiber type or function directly. The box color does not usually convey technical information; instead, it provides a protective enclosure for the fibers and connectors.

Fiber and Cable Color Coding Inside the Box

Inside the terminal box, color coding is critical for identifying fibers, buffer tubes, and cable types. The TIA-598-C standard defines a 12-color sequence for individual fibers: blue, orange, green, brown, slate, white, red, black, yellow, violet, rose, and aqua. This sequence repeats for additional fibers in multi-fiber cables. Cable jackets also use color to indicate fiber type:

- Yellow: Single-mode fiber
 - Orange: Multi-mode fiber (OM1/OM2)
 - Aqua: Laser-optimized multi-mode fiber (OM3/OM4)
- These colors allow technicians to quickly identify fiber types, locate specific strands, and ensure proper splicing or termination.
