

Fiber optic broadband connected to the router

Article Overview

Yes, fiber optic broadband is connected to a router, typically via an Optical Network Terminal (ONT) or fiber modem that converts the light signals into data your router can use.

How Fiber Optic Broadband Connects to a Router

Fiber optic internet delivers data as light pulses through ultra-thin glass or plastic fibers, which cannot be directly interpreted by standard routers. To make the connection usable for home networks, an Optical Network Terminal (ONT) or fiber modem is required. The ONT converts the optical signals into electrical signals that a router can understand and distribute to devices via Ethernet or Wi-Fi .

Typical Setup Steps

- **Install the ONT:** The fiber cable from your ISP enters your home and connects to the ONT. This device may be installed inside or outside the home and is powered using its adapter .
- **Connect the ONT to the Router:** Use a high-speed Ethernet cable (Cat6 or higher recommended) to link the ONT's Ethernet port to the router's WAN port. This allows the router to distribute the internet connection to all devices in your home .
- **Router Configuration:** Power on the router and configure it according to your ISP's instructions. Modern routers often support gigabit speeds and Wi-Fi 6 or newer standards to fully utilize fiber broadband .
- **Optional Combo Units:** Some ISPs provide a single device that combines the ONT...
