

Fiber optic cable temperature monitoring and high temperature alarm

Overview

Distributed Temperature Sensing (DTS) systems provide temperature information for accurate thermal monitoring, fire detection, and condition assessment by utilizing standard fiber optic cables. Unlike traditional electrical temperature measurement (thermocouples & RTD), the length of the fiber optic cable is the temperature. Real-time cable thermal monitoring using two complementary fiber optic technologies: fluorescent point sensors for cable joint hotspot detection at high-precision terminations, and distributed temperature sensing (DTS) for continuous cable heat monitoring along the full route. Offshore wind park cables are vulnerable to damage from fishing gear or dropped anchors. Monitoring the burial depth of.
