

Fiber optic connection to a 10 Gigabit switch

Article Overview

To connect a 10 Gigabit switch via fiber, use SFP+ transceiver modules with duplex fiber optic cables, ensuring compatibility with the switch and fiber type.

Required Components

- **SFP+ Modules:** Most 10GbE switches support SFP+ slots, which accept hot-swappable transceivers for fiber connections. Choose modules based on your fiber type: 10GBASE-SR for multimode fiber (short distances) or 10GBASE-LR for single-mode fiber (long distances) .
- **Fiber Optic Cables:** Use duplex fiber cables with LC connectors, as SFP+ modules typically require two strands—one for transmit and one for receive. Multimode fiber is suitable for runs under ~1000 feet, while single-mode fiber is recommended for longer distances . Pre-terminated cables with LC connectors simplify installation and reduce errors .
- **Switch Ports:** Ensure the switch has available SFP+ ports. Some switches also support 10GBASE-T modules for copper connections, but fiber is preferred for longer distances and higher performance .
