

Fiber optic internet access without a splitter installed

Article Overview

Fiber optic internet can be installed without a splitter by using a direct Fiber-to-the-Home (FTTH) connection with an Optical Network Unit (ONU) inside your home.

Direct Fiber Installation

Fiber-to-the-Home (FTTH) technology allows fiber optic cables to run directly from the provider to your residence, eliminating the need for a traditional splitter or coaxial outlet . In this setup:

- A fiber terminal is installed on the exterior of your property.
- A fiber-optic cable runs directly into your home.
- An Optical Network Unit (ONU) converts the light signals from the fiber into digital data that your devices can use .
- The ONU connects to a fiber-ready router, which distributes internet via Wi-Fi or Ethernet throughout your home . This method provides high-speed, low-latency internet without relying on shared splitters or traditional cable infrastructure .

Alternative Methods Without Splitters

If direct fiber installation is not feasible, there are other options to access high-speed internet without a splitter:

- Fixed Wireless Internet: A provider installs an antenna on your property to receive...
