

Fiber optic terminal box directly outputs pigtail

Article Overview

A fiber optic terminal box with direct output pigtail allows easy connection of drop fibers to pre-terminated pigtails, simplifying FTTH and small network deployments.

Overview

A direct output pigtail fiber optic terminal box is designed to terminate and manage optical fibers efficiently. It typically supports 4, 6, 8, 12, or 24 cores, with some models offering up to 48 ports for larger installations (). The box combines a fusion splicing compartment with a fiber management area, allowing both hot and cold splicing while protecting fibers from environmental damage ().

Key Features

- **Direct Pigtail Output:** Factory-terminated connectors on pigtails (LC, SC, ST) are spliced to incoming fibers, eliminating the need for field-installed connectors and reducing installation time ().
- **Durable Housing:** Made from ABS or ABS+PC, often flame-retardant and moisture-resistant, providing protection against dust, humidity, and physical impact ().
- **Flexible Installation:** Can be wall-mounted, desktop-mounted, or installed in weak current boxes, suitable for residential, small office, or enterprise environments ().
- **Fiber Management:** Includes dedicated splicing trays, fiber routing paths, and coiling space to prevent fiber breakage and maintain signal integrity ().
- **Compatibility:** Supports various connector types (LC, SC, ST, FC) and can integrat...
