

Fiberglass cable tray angle

Article Overview

Fiberglass cable trays use angled accessories such as 90° horizontal and vertical bends to route cables efficiently while maintaining structural integrity.

Types of Angled Accessories

Fiberglass cable tray systems, like the Cope-GLAS system, offer horizontal 90° splice plates and other angled fittings to allow smooth directional changes in cable routing . These accessories are made from durable polyester fiberglass, ensuring corrosion resistance, non-conductivity, and lightweight handling. Vertical bends and elbows are also available to navigate changes in elevation or to connect trays at different heights.

Material and Design Considerations

Fiberglass trays are manufactured using pultrusion technology, providing high strength-to-weight ratios, corrosion resistance, and non-magnetic properties . This makes them suitable for harsh environments, including offshore and industrial applications. The trays are available in various widths and heights, and the angled accessories are designed to match these dimensions for seamless integration .

Installation Guidelines

When installing angled fiberglass cable trays:

- Select the correct angle accessory (e.g., 45°, 90°) based on the required cable pa...
