

Fireproofing treatment of cable tray partitions

Overview

The most commonly used materials for fire-proof separation of cable trays are fire-proof boards, fire-proof coatings, fire-proof bags, fire-proof mud, and TST CABLES alternative products such as light fire-proof sections. Their advantages and disadvantages are as follows: Our tested solutions for cable fire protection can delay the spread of fire in order to minimise the damage sustained. Effective protection of cable systems around the world: our tried-and-tested FLAMMOTECT-A and DG-CR 0.7 products are successfully used to protect cables in high-rise buildings. Therefore, it is crucial to set up fire-blocking sections (fire sections/fire partitions) on cable trays and select appropriate fire-blocking sections (fire sections/fire partitions) materials. At slab pen penetrations shall have a waterst re that the partition can effectively prevent cable trays.
