

Fixed Indian Optical Cable Fault Locator

Article Overview

Fixed optical cable fault locators in India include visual fault locators (VFLs) and OTDR-based devices, designed for precise fault detection in singlemode and multimode fibers.

Overview

Fixed optical cable fault locators are specialized instruments used to detect and locate faults in optical fiber networks. They are widely used in telecom, railways, defense, and power industries in India for both singlemode and multimode fibers. These devices help identify breaks, bends, or connection issues in fiber cables, ensuring network reliability and minimizing downtime.

Types and Features

- Visual Fault Locators (VFLs)
 - Emit visible red laser light (~ 635 nm) to trace fiber continuity and locate faults visually.
 - Typical range: up to 5 km depending on fiber type and application.
 - Compatible with standard optical connectors (2.5 mm and 1.25 mm adapters available).
 - Operating time: approximately 40 hours in flashing mode.
 - Laser class: Class 2 (IEC 60825-1:2014), ensuring safe handling.
- OTDR-Based Fault Locators
 - Measure backscattered light to detect faults over long distances.
 - Can be customized for specific wavelengths (e.g., 1310 nm, 1550 nm, 1625 nm) a...
