

Fixing of cable tray threaded rods

Article Overview

Cable tray threaded rods are typically fixed using ceiling or wall-mounted supports, rod clips, nuts, washers, and slotted channels to ensure secure suspension and proper alignment.

Suspended Mounting with Threaded Rods

Suspended mounting is the most common method for overhead cable tray installations. Threaded rods are used to hang the tray from the ceiling, allowing for adjustable height and easy cable access during maintenance. The rods are typically fixed to the ceiling slab using anchors or UNIFIX supports, depending on the load and ceiling type .

Hardware and Accessories

- Rod Clips: Small cable containment can be attached to threaded rods using rod clips, which provide a stable arm for supporting trays, baskets, or trunking .
- Nuts and Washers: GI nuts and washers are used to secure slotted channels or brackets to the threaded rods, ensuring the tray remains level and stable .
- Slotted Channels: GI slotted C-channels (e.g., 41 x 41 x 2 mm) are installed on the rods to support the cable tray and distribute weight evenly .
- Mounting Clamps and Tray Hangers: These provide additional support for heavy cables and help maintain alignment .

Installation Guidelines

- Determine Rod Size: Use 10mm GI threaded rods for trays below 300mm and 12...
