

G60 Relay Protection

Article Overview

The Multilin G60 is a high-performance generator protection relay designed for medium and large generators, offering advanced protection, monitoring, and communication capabilities.

Overview

The Multilin G60 is part of GE Vernova's UR platform and provides comprehensive protection for medium and large generators, including steam, combustion turbines, combined-cycle units, multi-circuit hydro units, and pumped storage generators without requiring CT secondary switching . It integrates advanced automation, fault recording, and communication features to enhance generator reliability and minimize downtime .

Key Protection Features

- **Stator Differential Protection:** High-speed, sub-cycle detection of stator phase faults with immunity to CT saturation and external disturbances .
- **Stator Ground Fault Protection:** Voltage differential method using third harmonic unbalance, insensitive to absolute harmonic values, with optional third harmonic undervoltage for delta-connected PTs .
- **Breaker Failure Protection:** Monitors timely operation of connected breakers to prevent cascading faults .
- **Loss of Excitation and Reverse Power Protection:** Detects generator excitation loss and reverse power flow to prevent damage .
- **Over/Underfrequency and Rate-of-Change Monitoring:** Ensures generator operatio...
