

Gigabit Ethernet and 10 Gigabit Fiber Optic PoE Switch

Article Overview

Gigabit and 10 Gigabit Fiber Optic PoE switches provide high-speed data transfer with power delivery over Ethernet, supporting both copper and fiber connections for versatile networking applications.

Key Features

Port Speeds and Types: Modern PoE switches offer a combination of 10/100/1000 Mbps RJ-45 ports for standard Gigabit Ethernet devices and 10GbE uplink ports for high-speed backbone connections . Many switches support multi-gigabit RJ-45 ports (2.5G, 5G, 10G) to accommodate faster devices without requiring fiber . **PoE Power Delivery:** These switches provide IEEE 802.3af/at PoE+, delivering up to 30W per port, which is sufficient for powering IP cameras, Wi-Fi access points, VoIP phones, and other PoE-enabled devices . Some models allow simultaneous full-power delivery across all ports, eliminating power bottlenecks in high-demand environments . **Fiber Optic Compatibility:** Many switches include SFP/SFP+ slots for single-mode or multi-mode fiber, supporting distances from 300 meters to 100 km, depending on fiber type . This enables long-distance connections between buildings or data centers while maintaining high-speed 10GbE performance. **Redundancy and Reliability:** Industrial-grade switches often feature dual redundant power inputs with auto failover, DIN-rail or wall mounting, IP40-rated metal enclosures, and wide operating temperature ranges (-40°C to +85°C), making them suitable for harsh environments . Dual uplink ports allow redundant fiber or copper links for network resilience . **Management and Advanced Features:** Switches may be unmanaged Layer 2 for plug-and-play simplicity...
