

High-Temperature Resistant Optical Cable

Article Overview

High-temperature resistant optical cables are designed to operate reliably in extreme heat, with options available for temperatures ranging from 150°C up to 385°C, and are offered by factory-direct suppliers for industrial and specialized applications.

Key Features

- **Temperature Resistance:** Optical fibers and cables can withstand extreme temperatures. Standard high-temperature fibers operate up to 180°C, while specialized fused silica fibers with heat-resistant coatings can handle –190°C to +385°C . Mineral-insulated cables can endure temperatures up to 950°C .
- **Materials and Insulation:** Common insulation materials include silicone, fiberglass, mica glass tape, and fused silica coatings. These materials provide flexibility, chemical resistance, flame retardancy, and dielectric properties .
- **Fiber Types:** Both single-mode and multimode fibers are available, often with dual coatings or optional hermetic carbon layers for enhanced fatigue resistance and hydrogen permeation protection .
- **Construction:** High-temperature cables may feature fiberglass reinforcement, tinned copper cores, steel overbraid, or Al-Zr alloy layers to maintain mechanical strength and electrical performance under heat .

Applications

- **Industrial Automation and Robotics:** Flexible, heat-resistant cables for machinery...
