

High-density intelligent cold aisle 1000mm deep in stock

Article Overview

High-density intelligent cold aisle containment systems with 1000mm depth are available from multiple vendors, offering modular, energy-efficient, and customizable solutions for modern data centers.

Overview

Cold aisle containment systems are designed to separate cold supply air from hot exhaust air, improving cooling efficiency, reducing energy consumption, and maintaining consistent intake temperatures for IT equipment . A 1000mm deep configuration is suitable for high-density server racks, providing sufficient space for airflow while accommodating standard rack layouts.

Key Features

- **Modular and Scalable:** Systems can be floor-standing or suspended, allowing retrofits or new builds, and can scale with future rack expansion .
- **Intelligent Monitoring:** Some solutions include embedded sensors and airflow management, enabling real-time monitoring of temperature, airflow, and energy usage .
- **Compatibility:** Designed to work with various rack heights and types, including high-density cabinets, without interfering with fire suppression or detection systems .
- **Materials and Durability:** Premium-grade aluminum or steel construction ensures long-term performance and supports heavy equipment
