

Home wiring for distribution boxes

Article Overview

Proper wiring of a home distribution box ensures safe, organized, and code-compliant electricity distribution throughout the house.

Key Components and Types

A home distribution box, also called a consumer unit, fuse board, or panel board, typically contains circuit breakers, residual current devices (RCDs), busbars, terminal blocks, and wiring for phase, neutral, and ground connections . There are three main types:

- Main Distribution Board (MDB): Receives incoming power from the utility and houses the main isolator (double-pole MCB) and RCDs.
- Sub Distribution Board (SDB): Distributes power to specific areas or floors.
- Final Distribution Board (FDB): Supplies power to individual circuits like lights, fans, and outlets.

Installation Guidelines

- Placement: Install indoors in a dry, accessible area with good ventilation, typically around 1.5 meters above the floor. For outdoor installations, use a waterproof box with a proper IP/NEMA rating .
- Mounting: Mark and drill holes, fix the box with expansion bolts, and ensure it is level and stable .
- Grounding: All metal parts, including the box, must be properly grounded to prevent electric shock
