

# How high a temperature can Hytrel optical cable withstand

## Overview

The broad and consistent temperature performance of Hytrel® (-40°C to 150°C) makes it an ideal flexible polymer solution for the automotive, wire and cable, industrial and consumer sectors. Optical fiber's ability to withstand extreme heat and cold directly impacts signal integrity, network reliability, and maintenance costs, especially in harsh environments like industrial facilities, outdoor installations, and data centers. Let's explore high-temperature resistant fiber optic cable materials and designs that keep fiber optic cables running reliably, even in extreme conditions. \*

Typical. Flammability UL-94 V0 / HB Grade Hytrel with 12 colors of tube. Optical fibres are transparent, flexible strands made from plastic or glass which transmit data in the form of light particles (photons) which pulse through the cable.
