

How is the yellow color of pigtail fibers determined

Overview

Each individual pigtail is color coded according to industry standard TIA-EIA-598-A. A Fiber Pigtail is a single, short, usually tight-buffered, optical fiber that has an optical connector pre-installed on one end and a length of exposed fiber at the other end. This sensitive end is fusion spliced onto another single fiber (or fiber bundle), providing a robust and reliable link. A fiber optic pigtail is a short length of optical fiber —typically 0. The bare fiber end. Today, I'll show you how to pick the right patch cord or pigtail — step by step. A Fiber Patch cord connects two devices. You plug it into a switch, router, or patch panel. Single-mode fiber pigtails, identified by their yellow color, use a 9/125 micron cable and are terminated with a single-mode fiber connector. We also provide a full set of customized services, such as fiber counts. WolonFiber's 12-Color Fiber Optic Pigtail Packs are manufactured strictly to the TIA-598-C standard with vibrant, easy-to-identify colors.
