

How many types of fiber optic connectors are there

Article Overview

There are over 100 types of fiber optic connectors, with SC, LC, ST, FC, and MPO/MTP being the most widely used in modern networks.

Fiber optic connectors are mechanical devices that align and join optical fibers end-to-end, ensuring minimal signal loss and precise light transmission. While more than 100 connector types have been introduced, only a subset is commonly used in telecommunications, data centers, and industrial applications .

Common Fiber Optic Connector Types

- SC (Subscriber Connector): Square-shaped with a push-pull coupling, widely used in FTTH deployments and data centers. SC/APC variants are preferred where low return loss is critical .
- LC (Lucent Connector): A miniaturized version of SC with a 1.25 mm ferrule, ideal for high-density applications. LC connectors are common in modern data centers due to their compact size and duplex capability .
- ST (Straight Tip): Features a bayonet-style twist-lock mechanism, used in legacy systems, industrial networks, and some military applications .
- FC (Ferrule Connector): Uses a threaded coupling for secure connections in high-vibration environments like factories or railway networks .
- MPO/MTP (Multi-Fiber Push-On / Multi-Fiber Termination Push-On): Designed for high-density, multi-fiber applications, often used in backbone cabling and data centers
