

How much does a direct fusion optical cable terminal box cost

Article Overview

Direct fusion optical cable terminal boxes typically cost between \$30 and \$400 depending on capacity, material, and features.

Price Range and Factors

- Small to mid-size boxes (12-24 ports/splices): These are commonly used for FTTH or small network deployments. Prices generally range from \$30 to \$100 for wall-mounted or horizontal enclosures made of cold-rolled steel or durable plastic with basic fusion splice trays (Amazon, eBay, Fiberinthebox) .
- Larger capacity boxes (48-96 splices): Designed for higher-density networks or outdoor installations, these enclosures can support multiple fusion splice trays and include features like UV-resistant thermoplastic, environmental sealing, and strain relief. Prices typically range from \$150 to \$400 depending on the number of trays, splice capacity, and additional accessories like adapters or PON components (Primus Cable, FS) .
- Material and installation type: Outdoor-rated boxes for aerial or direct burial applications are generally more expensive due to weatherproofing and impact-resistant materials. Indoor wall-mounted boxes are usually more affordable.
- Additional features: Some boxes include pre-installed fusion splice sleeves, modular trays, or mid-access capabilities, which can increase the cost.
