

How much should a construction distribution box cost

Article Overview

A construction distribution box typically costs between \$150 and \$2,000, depending on size, material, capacity, and installation complexity.

Price Ranges and Factors

- Residential Units: Standard single-phase boxes for homes usually range from \$150 to \$1,500, including parts and professional installation, depending on amperage, number of circuits, and labor complexity .
- Commercial and Industrial Units: Larger three-phase or heavy-duty boxes can cost \$1,000 to \$2,000 or more, especially when made from stainless steel or equipped with advanced monitoring and control systems .
- Material: Plastic enclosures are the most affordable, while powder-coated steel or 304 stainless steel units are more durable and expensive . Outdoor or weatherproof boxes carry a premium due to environmental protection requirements .
- Internal Components: Empty boxes are cheaper; adding high-quality circuit breakers, surge protectors, and busbars increases the cost significantly .
- Installation and Labor: Professional installation can range from \$1,300 to \$1,800 for standard residential setups, with industrial installations potentially costing several thousand dollars due to labor, permits, and complexity .
- Customization and Features: Smart monitoring, remote control, digital displays, and integration with building management systems can further increase upfront costs but may reduce long-term maintenance and energy expenses
