

How to Choose an IP Address for an Industrial Switch

Overview

You have to use the RFC 1918 private IP address ranges (10. x) for internal industrial networks. xxx or any public IP range unless explicitly provisioned for external communication. Every time a proximity sensor trips, a Variable Frequency Drive (VFD) ramps up, or an operator touches an HMI screen, a series of digital messages are flying across the plant floor. In this environment, IP addresses act as the critical digital coordinates that ensure these messages reach the right. In this article, you'll learn setting a static IP for PLC programming on your PC to ensure seamless communication with other devices on a local Ethernet network. Why Set a Static IP Address for PLC Programming?

When programming PLCs, it's necessary to configure your computer's IP address for. When building industrial machinery and connecting PLCs, HMIs, VFDs etc over ethernet, is there any convention or guidance regarding IP address range choices?

We typically use 192. However, we bought a company 5 years ago, and noticed on one of their product lines, all machines are. When you buy an RTA gateway, such as an ASCII to PLC gateway, a Modbus to PROFIBUS gateway or any other one of our gateways, it needs to have an address. There are two ways a gateway can get that address, either it's supplied by a device on your network that is a DHCP (Dynamic Host Configuration. Antaira Technologies breaks down ten mission-critical capabilities that separate industrial-grade switches from commercial-grade compromises — and why it matters on the plant floor When a network failure means halted production or compromised safety, “good enough” connectivity is not an option. The industrial switch configuration manual is a detailed guide that instructs users on how to corre...
