

How to add a 45-degree angle to a cable tray bend

Article Overview

A 45-degree bend in a cable tray is achieved by making two 22.5-degree cuts on separate tray sections and joining them to form a mitered joint.

Step-by-Step Instructions

1. Measure and Mark the Cuts

- Determine the location of the bend on the cable tray.
- Draw a perpendicular line across the tray width at the bend point.
- Using a protractor or angle finder, mark a 22.5-degree angle from the perpendicular line on each of the two tray sections. The second piece's cut should be in the opposite direction to the first to allow proper joining .
- 2. Cut the Tray Sections
- Use an appropriate cutting tool, such as an angle grinder with a metal cutting disc or a hacksaw, to make the 22.5-degree cuts along the marked lines.

3. Deburr and Smooth Edges

- After cutting, remove any sharp edges or burrs using a file or deburring tool.
- This step is crucial to prevent injury and protect cable insulation during installation .

4. Join the Sections

- Align the two cut sections so that the 22.5-degree cuts form a 45-degree mitered joint.
- Test-fit the pieces to ensure proper alignment.
- Secure the joint using cable tray connectors, bolts, or other recommended hardw...
