

How to adjust a Banner fiber optic sensor

Overview

R55F sensors feature TEACH mode sensitivity adjustment, by presenting the light and the dark sensing conditions to the sensor. Advanced sensor for use with plastic fiber optics Easy-to-set automatic single-point programming plus manual adjustment for fine-tuning 16-bit microcontroller and 12-bit Analog-to-Digital converter for high-performance, low-contrast sensing Easy-to-read 4-digit display for TEACH and signal strength. Page 1 D12 Expert Series – TEACH-Mode Fiber Optic Sensors One-button programmable sensors for use with glass or plastic fibers D12 Expert Features • Fiber optic sensors for DIN rail mounting; 10 to 30V dc operation • Visible red (680 nm) light source; models for use with either glass or plastic. The D10 Expert Sensor is a high-performance plastic fiber-optic sensor whose many configuration (TEACH-mode) options make it suitable for demanding applications. Advanced 16-bit microcontroller technology makes this possible. Going through some basic photoelectric concept training.
