

How to configure wiring for distribution box switches

Article Overview

To wire a switch in a distribution box, connect the input power to the main breaker, route it through protective devices, and then connect the switch to the load with proper phase, neutral, and earth connections.

Step 1: Safety First

Before starting, turn off the main power supply and verify with a voltage tester that no live current is present. Always wear insulated gloves and follow local electrical codes to prevent accidents ().

Step 2: Identify Components

A typical distribution box includes:

- Main MCB (Double Pole): Controls overall power supply.
- RCCB: Provides protection against leakage currents.
- Single Pole or Double Pole MCBs: Control individual circuits or loads.
- Neutral and Earth Links: For proper grounding and neutral connections ().

Step 3: Connect the Main Supply

- Connect the phase and neutral wires from the incoming power supply to the input terminals of the main MCB.
- Connect the output of the main MCB to the input of the RCCB...
