

How to connect a fiber optic pigtail to a fiber optic cable

Article Overview

Connecting a fiber optic cable to a fiber optic pigtail is typically done via fusion or mechanical splicing, ensuring a low-loss, reliable connection.

Understanding Fiber Optic Pigtails

A fiber optic pigtail is a short optical fiber with a factory-terminated connector on one end and a bare fiber on the other. The connector end plugs into equipment, patch panels, or adapters, while the bare end is spliced to the incoming fiber cable to create a permanent, low-loss joint. Pigtails are widely used in single-mode fiber applications and are preferred over patch cords for terminating bulk fiber runs.

Tools and Materials Needed

To connect a fiber optic cable to a pigtail, you will need:

- Fiber cleaver for precise cutting of the fiber
- Fusion splicer or mechanical splice kit
- Fiber stripper to remove the protective coating
- Isopropyl alcohol wipes for cleaning
- Heat-shrink sleeves for protection after splicing
- OTDR or power meter to test the connection
