

How to connect a router to fiber optic internet in an apartment

Article Overview

To use a fiber optic router in an apartment, connect it to the Optical Network Terminal (ONT) provided by your ISP, configure Wi-Fi settings, and optimize placement for best coverage.

Step 1: Confirm Fiber Availability

Check if your apartment is within the fiber network coverage using your ISP's availability tool. Apartments are considered multiple dwelling units (MDUs), and installation may require coordination with building management or landlord approval .

Step 2: Fiber Installation

A technician will run a fiber cable from the neighborhood network to your apartment. Inside, a small box called an Optical Network Terminal (ONT) is installed, which converts light signals from the fiber into electrical signals your router can use . This may involve drilling a discreet hole for the fiber entry, which is sealed after installation .

Step 3: Connect Your Router

- Use an Ethernet cable to connect the WAN port of your router to the ONT .
- Ensure the router and ONT are near power outlets, as both require electricity
