

How to connect fiber optic cable and the price of fiber optic junction box

Article Overview

To connect fiber optic cables to an optical junction box, carefully prepare the cable, insert it into the box, splice or connect fibers using adapters, and secure the cables while maintaining proper bend radius; prices vary from \$20-\$200 for boxes and \$50-\$300 for professional installation.

Installation Steps

1. Choose the Location: Select a location close to the fiber entry point, avoiding direct sunlight, moisture, or areas prone to dust. Ensure the box is accessible for future maintenance (). 2. Mount the Junction Box: Mark drill holes using a level, drill, insert dowels, and secure the box with screws. For rack-mounted boxes, attach brackets and fix the box to the designated position (). 3. Prepare the Fiber Cable: Carefully strip the outer sheath without damaging the fibers. Use pre-terminated pigtails or branch fiber jumpers if available (). Maintain the standard bend radius to prevent signal loss (). 4. Insert and Secure the Cable: Introduce the fiber into the box through the cable inlet, using grommets to hold it in place. Route the fiber along the internal paths, securing with cable ties where necessary, but avoid over-tightening (). 5. Connect or Splice Fibers:

- Splicing: Use a fusion splicer to permanently join fibers.
- Connector Adapters: Insert fibers into adapters (LC, SC, ST) ensuring one-to-one port correspondence.
- Testing: Verify connections with a fiber optic tester to ensure signal integrity (). 6...
