

How to connect the optical distribution box

Article Overview

Connecting an optical distribution box involves securely mounting the box, introducing fiber optic cables, routing them carefully, and terminating connections to adapters or patch panels.

Preparation Before Installation

- Determine the installation location: Choose a dry, ventilated, and stable area, avoiding non-load-bearing walls, water pipes, or high-voltage cables. Indoor boxes are typically installed 1.2–2.5 meters above the ground, while outdoor boxes are 2.8–3.2 meters high .
- Check equipment and tools: Ensure the distribution box, optical interface boards, protective sleeves, and jumpers are complete. Prepare expansion bolts, levels, cable grommets, protective ground cables, and cable management accessories .

Mounting the Distribution Box

- Wall-mounted: Secure the box using expansion bolts, ensuring it is horizontal and vertical with a deviation of less than 3mm .
- Rack-mounted: Attach brackets to the sides of the box and fix them to the rack with screws. Confirm the installation direction before mounting .

Introducing Fiber Optic Cables

- Insert the optical cable through the designated entry hole using a grommet or pro...
