

How to connect the optical module to the optical transceiver box

Article Overview

To connect an optical module to an optical transceiver box, carefully insert the module into the port, remove dust caps, and attach the compatible optical fiber while following ESD and safety precautions.

Step 1: Preparation

- Select the correct optical module based on transmission distance, wavelength, and fiber type (single-mode or multi-mode) to ensure compatibility with the transceiver box and peer devices .
- Inspect the module for physical damage, scratches, or dirt, and ensure the connectors are clean and dust-free .
- Prepare ESD protection: wear a grounded wrist strap and work on an antistatic mat to prevent electrostatic discharge that could damage the module .

Step 2: Installing the Optical Module

- Remove the module from its packaging and hold it by the sides or metal cage, avoiding contact with the optical bore or gold-plated contacts .
- Align the module with the port on the transceiver box, ensuring the identifier label is oriented correctly according to the device specifications .
- Gently slide the module into the port horizontally until it clicks or the spring mechanism engages, indicating proper installation .
- Check the installation by lightly pulling the module; if it moves, reinstall it to ensu...
