

# How to connect the optical module to the router s network port

## Article Overview

To connect an optical module to a router port, insert the SFP/SFP+ module into the port, secure it, and then connect the fiber optic cable, ensuring proper alignment and cleanliness for reliable network operation.

### Step 1: Prepare for Installation

Before handling the optical module, wear an ESD wrist strap to prevent electrostatic discharge that could damage the module or router port . Inspect both the module and the router port for dust or debris, and remove any dust caps from the module and fiber cable ends . Ensure the fiber cable type matches the module specifications (e.g., LC duplex, single-mode, or multi-mode), .

### Step 2: Insert the Optical Module

Identify the alignment key on the SFP/SFP+ module and match it with the keyway in the router port. Slide the module straight into the port with firm, even pressure along the horizontal axis until it clicks into place . Some modules may have a latch or screw; engage it to secure the module without overtightening . Avoid rocking or forcing the module to prevent port damage.

### Step 3: Connect the Fiber Optic Cable

After the module is seated, clean the fiber connector end-faces using approved clea...
