

# How to connect the optical port connector of a Huijue switch

## Article Overview

Huijue switch optical ports are connected using fiber modules (SFP/SFP+), with proper interface configuration and monitoring to ensure data transmission and link stability.

### Physical Connection

- Select the correct optical module: Use SFP (1G) or SFP+ (10G) modules compatible with the switch and fiber type (single-mode or multi-mode) .
- Fiber type and connectors: Single-mode fibers typically use LC connectors with wavelengths like 1310 nm, while multi-mode fibers use 850 nm LC connectors .
- Port connection: Insert the optical module into the switch's optical port, then connect the fiber patch cable to the module. Ensure the other end connects to the corresponding port on the target device (another switch, AP, or router) .

### Configuration

- Enable the interface: Use the command to bring the optical port up, e.g., interface followed by undo shutdown .
- Verify module and link status: Run display transceiver to check module type, wavelength, and diagnostic information. For a specific port, use display transceiver interface .
- PoE and hybrid cables: If using hybrid optical/electrical cables to power APs, configure the optical port as a proxy for the electrical port using LLDP commands, e.g., poe lldp-proxy .
