

How to cut a sloping bridge tray

Overview

To prepare the trays, bring 4 inches of water to a boil and remove from heat to cool for 6-7 minutes. Trim the model neatly close to the buccal margin, removing as much of the lip of the buccal sulcus as possible. Calculate horizontal, vertical, or compound cable tray offsets based on bend angle, offset distance, and available installation space. Measure this distance along the straight tray. To enter bridge data the user presses the Bridge/Culvert button on the geometric data window (Figure 5-1). Once the bridge/culvert button is pressed, the Bridge/Culvert Data Editor will appear as shown in Figure 5-12 (your bridge/culvert editor will come up with a blank window until you have. To ensure a comfortable fit and optimal results, it is crucial to trim the trays correctly using small, curved, crown, and bridge scissors. The trays can be lightly flamed for added convenience.
