

How to install a fiber optic cable junction box after grinding

Article Overview

Proper installation of a fiber optic junction box after grinding requires careful cable preparation, secure mounting, and precise fiber termination to ensure signal integrity.

Step 1: Prepare the Installation Site

Choose a location close to the fiber transfer point, avoiding direct sunlight, moisture, or areas difficult to access for future maintenance. Mark the drill holes using a spirit level to ensure the box is mounted straight. Drill the holes, insert dowels, and attach the junction box securely with screws .

Step 2: Handle the Fiber Cable

After grinding the fiber ends, carefully remove the outer sheath and buffer coating without damaging the delicate strands. Ensure the fiber ends are clean and smooth to optimize splicing or connector attachment . Use a fiber cleaver and cleaning kit to prepare the fibers for termination.

Step 3: Insert and Secure the Cable

Feed the prepared fiber cable through the entry gland of the junction box. Fasten the cable to clamps or ties to prevent movement and maintain the minimum bend radius (usually $\geq 30\text{mm}$) to avoid signal loss or breakage . Organize the fibers neatly in the...
