

How to secure the bottom support frame of a network cabinet

Article Overview

Secure the bottom support frame by firmly attaching the base or bottom plate to the cabinet uprights, leveling the cabinet, installing adjustable bottom-support rails, and ensuring proper grounding.

Step 1: Prepare the Cabinet Base

- Place the cabinet frame horizontally on a stable surface and ensure it is level using a spirit level.
- If the cabinet has support feet, adjust them to achieve stability and prevent wobbling.
- Connect the base to the vertical uprights, securing each connection point with screws to ensure the frame is rigid and stable .

Step 2: Attach Bottom Plates or Corner Brackets

- For cabinets with a bottom plate, secure it to the corner brackets using self-tapping screws (e.g., M48mm) and tighten the plate to the enclosure with hex bolts (e.g., M825mm) to reinforce the frame .
- Ensure all corner brackets and beams are fastened properly to the front and rear doors if applicable, providing additional structural support .

Step 3: Install Bottom-Support Rails...
