

Huijue Core Switch Optical Port Indicator Lights

Article Overview

Optical port LEDs on Huijue Core Switches indicate link status, data activity, and potential faults, with solid or blinking green and amber/orange lights representing different operational states.

LED Color and Behavior

- **Solid Green:** The optical port is connected and the link is stable, indicating normal operation .
- **Blinking Green:** Data is actively being transmitted or received through the port, showing network activity .
- **Amber/Orange (Solid or Blinking):** May indicate slower link speed, configuration mismatch, minor errors, or a warning state on the port .
- **No Light:** The port is not detecting a link. This could be due to a disconnected cable, powered-off device, or misconfigured port .

Troubleshooting LED Issues

- **Check Physical Connections:** Ensure the optical cable is properly seated in the SFP/SFP+ module and the connected device is powered on .
- **Verify Port Configuration:** Use the switch management interface or console commands to confirm the port is enabled and not administratively down .
- **Monitor Optical Module Status:** Use the command `display transceiver` to view all optical ports or `display transceiver interface interface-type interface-number` for a specific port. This provides details such as transceiver type, wavelength, transfer di...
