

Huijue Switch with PoE Enabled

Article Overview

Huijue switches may support PoE if their model names include "PWR" or "PWH," indicating built-in PoE hardware.

Identifying PoE Support

To determine if a Huijue switch supports PoE, check the product name. Switches with "PWR" or "PWH" in their model name are designed to provide Power over Ethernet, while models without these identifiers do not support PoE . PoE functionality is hardware-dependent, meaning non-PoE switches cannot be upgraded to support PoE through software alone .

PoE Standards and Capabilities

If a Huijue switch supports PoE, it may implement one of the following standards:

- PoE (802.3af): Provides up to 15.4 W per port, suitable for IP phones and basic devices .
- PoE+ (802.3at): Provides up to 30 W per port, ideal for wireless access points and PTZ cameras .
- PoE++ (802.3bt Type 3/4): Provides 60–90 W per port for high-power devices like LED lighting, mini-PCs, or multi-radio APs . PoE switches can supply power while transmitting data over standard Ethernet cables, eliminating the need for separate power lines for connected devices .
