

In-wall embedded distribution box

Article Overview

An in-wall embedded distribution box is a compact electrical enclosure designed to house circuit breakers, terminal blocks, and other modular components within a wall, providing organized and protected power distribution.

Overview

An in-wall embedded distribution box is installed flush within a wall, optimizing space and maintaining a clean aesthetic while providing safe housing for electrical components. These boxes are commonly used in residential, commercial, and industrial settings to centralize electrical distribution and facilitate maintenance .

Key Features

- **Material:** Typically made from high-quality ABS plastic, fiberglass-reinforced polyester, or metal, offering durability and resistance to impact and corrosion .
- **Module Capacity:** Standard boxes accommodate DIN rail-mounted modules, often in configurations like 54 modules (3 sections of 18 modules each), allowing installation of circuit breakers, relays, and terminal blocks .
- **Protection Rating:** Many embedded boxes provide IP40 protection against dust and solid objects, with higher-end models offering IP66 or IP68 for water and dust resistance .
- **DIN Rails:** Equipped with multiple DIN rails (e.g., three 370 x 35 mm rails) for secure mounting of modular components .
- **Door Design:** Ergonomic doors with horizontal rotation, opening more than 90°, often halogen-free and designed for easy access to internal components
