

Indoor and outdoor IP specifications for distribution boxes

Overview

Indoor units are suited for controlled spaces with low moisture and particulates, often rated IP20–IP40, while outdoor enclosures require IP65–IP68 or NEMA 3R/4/4X ratings to resist rain, dust, and corrosion. Electrical enclosures are designed to protect critical electrical and electronic components from dust, moisture, accidental contact, and harsh environmental conditions. Whether installed in industrial plants, outdoor utility stations, manufacturing facilities, or commercial buildings, the right. An IP rating (also known as Ingress Protection Rating) indicates how well a device is protected against solids and liquids. Its main purposes are to: Keep wires organized and shielded. Prevent accidental contact with live circuits. The two digits are internationally binding — from junction boxes to industrial computers.
