

Install ONU on Optical Network Unit

Article Overview

Installing an ONU involves connecting it to the OLT, ensuring proper power and fiber connections, and configuring it for network access.

Pre-Installation Considerations

Before installing an ONU, consider the following factors to ensure optimal performance and reliability:

- **Location:** Place the ONU in a well-ventilated area, away from electromagnetic interference (EMI) sources such as radios or other wireless devices, to maintain signal quality and device longevity .
- **Mounting Hardware:** Depending on the model, ONUs can be wall-mounted or placed on a flat surface. Ensure the mounting method is compatible with the device and installation site .
- **Power and Connectivity:** Verify that power outlets and fiber connections are available at the installation site. ONUs require both electrical power and a fiber link to the OLT .
- **Device Compatibility:** Confirm that the ONU is compatible with the OLT in use, including supported PON standards (e.g., GPON, EPON) and management protocols (CLI, HTTP, SNMP, TR-069, Telnet), .

Hardware Installation

- **Fiber Connection:** Connect the incoming fiber-optic cable from the OLT or local distribution point to the ONU's PON port. Ensure the fiber connector is clean and properly seated to avoid signal loss
