

Installation of Indoor Distribution Boxes in South Asia

Article Overview

Indoor distribution boxes should be installed in dry, accessible areas with proper ventilation, using high-quality enclosures and components that meet IP/NEMA ratings and local electrical standards.

Selection of Distribution Boxes

When installing indoor distribution boxes, choose the right type based on load capacity, environment, and durability. For indoor applications, thermoplastic or steel enclosures are commonly used. Thermoplastic boxes are lightweight, corrosion-resistant, and suitable for standard indoor conditions, while steel enclosures offer higher mechanical strength for industrial settings. Ensure the box has an appropriate IP rating (typically IP20-IP65 for indoor use) to protect against dust and accidental contact.

Placement and Accessibility

Install the distribution box in a dry, well-ventilated area at an accessible height, usually around 1.5 meters from the floor for ease of operation and maintenance. Avoid locations near water sources, heat-generating equipment, or areas prone to vibration. Ensure sufficient clearance around the box for wiring and future upgrades.
