

Installation of Qatar Integrated Distribution Box

Article Overview

Installation of a Qatar Integrated Distribution Box requires compliance with KAHRAMAA standards, proper enclosure selection, and professional installation by certified electrical contractors.

Selection of Distribution Box

Choose a wall-mounted or custom LV panel enclosure suitable for your application. Options include PVC, solid rubber, or PC/ABS enclosures with IP54 protection (IP67 on request) for indoor or outdoor use. Ensure the box has high impact resistance, thermal stability, dielectric strength, and chemical resistance. Stainless steel fasteners and captive screws are recommended for durability and safety .

Compliance with Standards

All installations must comply with KAHRAMAA wiring codes and local regulations. This includes:

- Segregation of circuits to prevent interference and ensure safety.
- Proper evaluation of the LV side up to the vertical bus-bar by KAHRAMAA.
- Ensuring voltage variation does not exceed $\pm 6\%$ of nominal levels.
- Adherence to IEC/EN 62208 standards for enclosures .
