

Installation of U-shaped cable tray supports

Article Overview

U-shaped cable trays are installed by securely supporting the tray with hangers or brackets, ensuring proper alignment, load distribution, and safe cable placement.

Preparation and Handling

Before installation, offload trays carefully using forklifts or overhead cranes, ensuring slings or forks do not crush the siderails. Trays should be stored on adequate dunnage to prevent contact with moisture or uneven surfaces, and bundles should be stacked by type and width for easy access . For long sections, support with timber bearers is recommended to prevent bending or damage .

Support and Mounting

U-shaped trays are typically supported using trapeze or swing supports, wall brackets, or center-hung supports. The vertical hangers are threaded through cross members, with hex nuts and square washers used to secure the tray. The cross member should allow for horizontal adjustment to align the tray properly . Maximum support spacing is generally 3.6 meters, with a load capacity per hanger of 318-340 kg .

Installation Steps

- Mark the tray route on ceilings, walls, or floors, considering bends, T-pieces, and crossovers....
