

Installing a Home Lighting Distribution Box

Article Overview

A household lighting distribution box should be installed in a dry, accessible location, sized appropriately for the number of circuits, and equipped with proper protection devices to ensure safety and compliance with standards.

Choosing the Right Distribution Box

Select a box based on environment, load capacity, and durability. For indoor residential use, plastic or steel boxes are common, with steel offering higher durability and plastic being lighter for easier installation. Check the IP or NEMA rating to ensure protection against dust and moisture, especially if the box is near potentially damp areas .

Sizing the Box

For lighting circuits with incoming wire sizes less than 10 mm² and fewer than 20 switches, the box width should be the sum of switch widths plus 20 mm on each side, height as switch height plus 40 mm, and depth as maximum switch depth plus 10 mm. For more than 20 switches, consider two rows of switches with width calculated as the sum of switch widths plus 40 mm, height as switch height plus 40 mm, and depth as maximum switch depth plus 10 mm .
