

Instrument for testing optical cable length

Article Overview

Optical fiber length can be measured accurately using specialized instruments such as optical fiber length meters, visual optical length testers (VOLT), and beaming optical length testers (BOLT), which employ light-based measurement techniques.

Optical Fiber Length Meters

Devices like the OZ Optics OFLM-1000 provide precise measurements of optical fiber lengths up to 500 meters with a resolution better than 2 mm and repeatability under 3 mm. These meters are ideal for laboratory and production environments where high accuracy is required. They can measure singlemode, multimode, and polarization-maintaining fibers, and allow data logging to a Windows PC for quality control and reporting purposes .

Visual and Beaming Optical Length Testers

For field applications, VOLT (Visual Optical Length Tester) and BOLT (Beaming Optical Length Tester) offer cost-effective alternatives to traditional OTDRs. The VOLT measures fiber length by looping two fibers at one end and calculating the round-trip time of light, providing end-to-end length measurements up to 1.5 km with an accuracy of ± 2.5 meters . The BOLT uses similar optical reflection methods to quickly determine fiber length without complex setups, making it suitable for installers and network technicians
