

# Intelligent PDU Production Line

## Article Overview

An Intelligent PDU Production Line is a fully automated system designed to manufacture, assemble, and test intelligent power distribution units (iPDUs) with high efficiency, precision, and integration of smart monitoring capabilities.

### Overview

An Intelligent PDU (iPDU) is a power distribution unit equipped with networked monitoring, remote control, and environmental sensing capabilities, allowing data centers and industrial facilities to manage power usage, monitor load, and control outlets remotely. Producing these units requires a sophisticated production line that integrates automation, quality control, and intelligent testing.

### Production Line Features

Modern intelligent PDU production lines often include:

- **Skid-Mounted Design:** The production line is pre-assembled on a skid, integrating all pipelines, pneumatic lines, and electrical cabling. This allows for rapid on-site installation without disassembly, reducing setup time and ensuring consistent operation.
- **Automated Material Handling:** Raw materials, such as electronic components, enclosures, and wiring, are automatically unpacked, weighed, and fed into the assembly process. Closed-loop feeding systems ensure precise material usage and minimize waste.
- **Automated Assembly and Testing:** Robotic systems, including embodied AI robots,...
