

Invisible Distribution Box Mounting Panel

Article Overview

Invisible distribution boxes are compact, flush-mounted panels designed for concealed installations, providing secure cable management and protection while maintaining a clean aesthetic.

Overview

Invisible distribution boxes, also known as recessed or flush-mounted panels, are designed to be installed behind walls, furniture, or display units, making them ideal for residential, office, or conference room environments. They allow for hidden cable management while providing mechanical protection for electrical, data, or fiber optic connections. These boxes are often used for PoE fiber optic termination, indoor optical cable fusion, and structured cabling.

Types and Features

- **Compact PoE Fiber Optic Distribution Boxes:** These are small, indoor boxes suitable for optical cable fusion and connection, offering mechanical protection for residential or office use.
- **Recessed Entertainment or Structured Media Boxes:** Designed for flush in-wall installation, these enclosures conceal AV and data connections behind TVs or wall units. Optional low-profile frames provide a neat finish, while high-profile covers allow bottom cable entry.
- **Wall-Mounted Enclosures:** Compact wall-mounted panels can meet high IP ratings (up to IP66) for dust and moisture protection, with flexible cable entry options and simple interior installation
