

Iran installs electrical distribution box

Article Overview

Iran is actively modernizing its electrical distribution network with new box-type substations, smart meters, and compliance with national standards.

Recent Installations

Iran has recently received a 7400 kVA box-type substation from Xuzhou Zhongtie Electric Group, designed for rapid deployment with integrated high-voltage switchgear, transformers, and low-voltage distribution units. This substation includes intelligent control and remote monitoring systems, ensuring safe and stable operation even under harsh climate conditions such as extreme heat and sandstorms, supporting industrial growth and grid modernization in southern Iran . Additionally, the Iranian Energy Ministry has installed four million smart electricity meters nationwide to manage consumption among high-usage residential and commercial users. These meters are equipped with consumption-limiting features to prevent overloads during peak summer demand, ensuring efficient energy distribution and reducing the risk of blackouts .

Regulatory Compliance

All electrical installations in Iran must comply with the National Building Regulations, Chapter 13, which cover design, installation, and safety of electrical systems in buildings. Key requirements include:

- Proper earthing and grounding of all electrical equipment to prevent electric shock and ensure operational safety....
