

Is it necessary to use a 1200Mbps router with a 200Mbps fiber optic connection

Overview

Yes, you can use your own router with fiber internet, as long as it has a Gigabit Ethernet WAN port to connect to your ISP's Optical Network Terminal. Upgrading to a Wi-Fi 6 or 6E router helps you get the full benefit of symmetrical fiber speeds. TP-Link router speed isn't one single number. Signal rate, link speed, and actual internet speed are distinct, and understanding the differences matters when troubleshooting or evaluating your connection. Just know that bringing your own gear means you. This guide comprehensively answers that, exploring the technicalities, benefits, and practical steps involved in using your existing router with a new fiber connection, ensuring you make an informed decision.
