

Is it safe to connect a fiber optic cable to a router

Article Overview

Yes, a router supplied with a fiber optic cable is generally safe and usable, provided it is connected correctly via an Optical Network Terminal (ONT) and is compatible with your fiber internet service.

How Fiber Optic Connections Work

Fiber optic internet uses light signals transmitted through thin glass or plastic fibers, which cannot plug directly into a standard router. The fiber line terminates at an Optical Network Terminal (ONT), usually provided and installed by your ISP. The ONT converts the light signals into standard electrical signals that your router can understand, typically outputting data via an Ethernet port .

Router Compatibility

To use a router with fiber internet safely and effectively:

- Ensure the router has a Gigabit Ethernet WAN port to connect to the ONT .
- Modern routers, especially Wi-Fi 6 or 6E models, are recommended to handle high-speed fiber connections and multiple devices efficiently .
- Older routers designed for DSL or cable may not support fiber speeds and could limit performance .
- The router should be placed in a dry, well-ventilated area and connected to a surge protector to ensure electrical safety
