

Is the SC-SC pigtail cable square or round

Article Overview

An SC-SC pigtail cable uses square connectors on both ends.

SC stands for Subscriber Connector, which is a square, snap-in style connector that latches with a push-pull motion and is keyed for proper alignment . In an SC-SC pigtail, both ends are terminated with SC connectors, making it a square-to-square configuration . One end is pre-terminated with the SC connector, while the other end is typically a bare fiber for fusion splicing .

Connector and Cable Details

- Ferrule size: 2.5mm ceramic or stainless alloy ferrule .
- Cable diameters: Commonly 0.9mm, 2.0mm, or 3.0mm, with options for singlemode or multimode fibers .
- Jacket types: LSZH, PVC, or Plenum depending on installation requirements .
- Applications: SC-SC pigtails are widely used to connect optical boards between devices, patch panels, or ODFs, and are common in P2P and PON networks .

Summary

The SC-SC pigtail is square on both ends, designed for reliable, low-loss connections in fiber optic networks. Its square connector shape distinguishes it from round connectors like FC or ST, which are used in other pigtail configurations .
